INTRODUCTION

Kernel IT N.V. is an IT company with a special focus on Microsoft solutions and licensing and was founded in 2015. Throughout the years, we have delivered professional consultancy services and business software in cooperation with our regional and international partners. We have executed projects for different companies and government organizations operating in the following sectors:

- Oil and Gas
- Energy
- Production
- Retail

Day-to-day business activity consists of sales, training, implementation and after-sale of:

- Cloud solutions
- Networking & Security
- IT infrastructure services
- Business Intelligence

With our regional and international partners, **we deliver the best solutions** for any type of business or government.

ABOUT US

Kernel Information Technology N.V. is a Surinamese company founded in 2015 (KKF #67271). We combine local capacity with strategic international partnerships to provide cloud and data management solutions.

Our main specialization is **Microsoft Technology** and we focus on solutions such as **Microsoft 365, SharePoint Online** and the **Power Platform (Power BI, PowerApps and Power Automate)**.

Our team consists of enthusiastic IT professionals who are addicted to learning new things and are always eager to help our customers reach their goals. Besides our core specialization, we offer various other IT and related services and brands such as **Adobe, Dropsuite and PFSense**.

We are always excited to hear from you personally so feel free to reach out!

WHAT WE DO

We offer planning and implementation services for various information management solutions. Our experience has shown us that in addition to the technology itself - change management, user experience and security are immensely important factors contributing to a successful implementation. Aligning with the many lessons learned in the past, our approach is to include these elements in and throughout every solution we implement.

MICROSOFT 365

We help you navigate the various plans and options within **Microsoft 365** and help you choose what is best for your organization. This can be followed up with the implementation, training and change management of the platform within the organization.

(MICROSOFT) INFRASTRUCTURE

Having a strong background in traditional on-premise infrastructure helps immensely in making the transition to the cloud. Knowledge of **Microsoft Server** technology as well as having general networking expertise is crucial to support and implement hybrid scenarios with **Microsoft Azure** which is a requirement in many environments.

BUSINESS INTELLIGENCE

On a superficial level, we help with the roll-out of **Power BI** within your organization. In practice, the prerequisites are numerous: a data governance policy, dependable information systems and security policy are just a few. We help you with the setup of these processes and assist on a functional level

based on our experience with previous projects and through strategic partnerships with financial and statistical professionals.

ADOBE

We are a certified Adobe reseller and offer license advice for most Adobe software such as **Adobe Acrobat**, **the Creative Suite** and **Adobe Sign**. Since Adobe and Microsoft align very well with each other we also configure deep integrations and workflows, where applicable – namely with **Adobe Sign**.
